

## WP Admin Protection

We congratulate you on installation of our plug-in that will not only help you to protect your website but will also make your work with CMS much easier and secure. Our plug-in offers several new solutions for website protection from hacking attacks and unauthorized access.

### Functions

- Setting secure link for control panel access.
- Filter by IP for access to website management.
- IP Block and Allow Lists.
- Reports to email on successful and unsuccessful attempts of access to the administrator's panel.
- Automatic blocking of IP addresses in case of unsuccessful attempt of access to the website.
- Flexible setting system; you can build yourself an algorithm of your website protection.
- ReCaptcha for administrator login page

### General Information.

Our plugin takes work with WordPress CMS to a new level. You do not have to bother about continuous attacks to your website. Apart from standard security measures our product offers absolutely new and unique approach to your website.

If you are tired of continuous password attacks on your website, you can just change the link for access to the administrator's panel. Before you installed our plugin you had to use the link [www.yourwebsite.ru/wp-admin](http://www.yourwebsite.ru/wp-admin) to access the administrator's panel, with the help of our script you will be able to set access by the link [www.yourwebsite.com/wp-admin?password](http://www.yourwebsite.com/wp-admin?password). So hackers will not be able to find the link and launch a password guessing application. Even if they will get your administrator's password and will use the old link without LinkPassword he will not be able to login and get the error message.

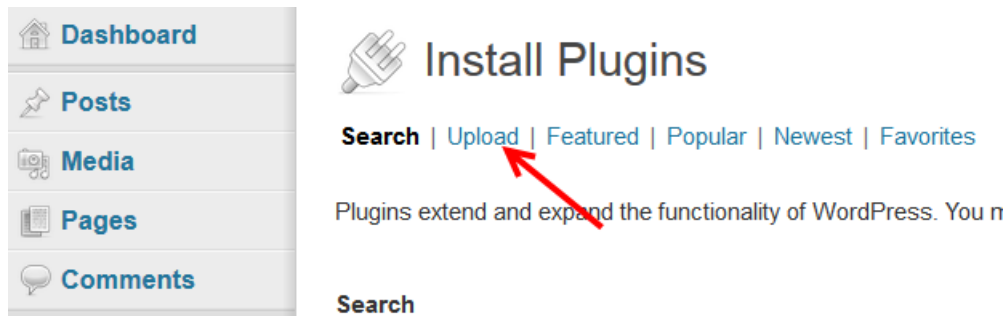

Even if your PC happens to be hacked with the help of a Trojan Horse software and intruders have managed to get your login and password, our script will send a message to your email notifying that someone has visited the control panel in your absence, and it means you will be able to change promptly your login and password to enter the administrator's panel.

### WP Admin Protection Installation

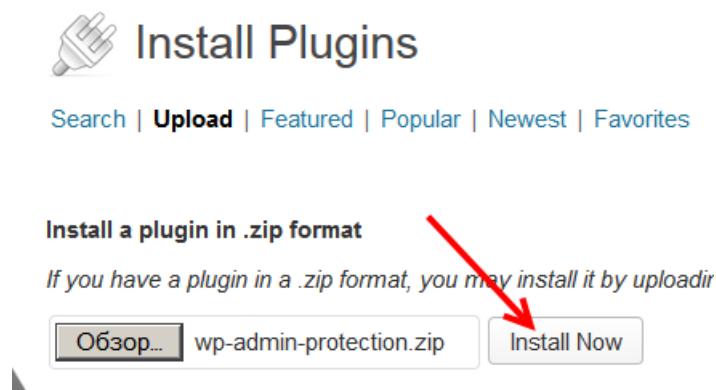

1. Open Word Press administrator's panel. Go to **Plugins** → **Add New**

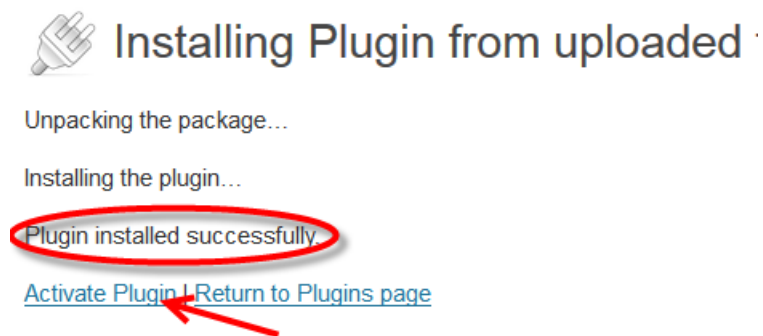

2. Click «**Upload**» locate the file you have downloaded wp-admin-protection.zip

3. Click **Install Now** button

4. Click **Activate Plugin** and you all set.

Next thing you have to do is set up plugin's settings.

# WP Admin Settings

The screenshot shows the WordPress Admin Settings page for the 'Profile' section. The left sidebar contains navigation links for Posts, Media, Pages, Comments, Appearance, Plugins, and Users. The main content area is titled 'Profile' and includes the following settings:

- Personal Options:**
  - Visual Editor:  Disable the visual editor when writing.
  - Admin Color Scheme:  Blue,  Gray.
  - Keyboard Shortcuts:  Enable keyboard shortcuts for comment moderation. [More information](#)
  - Toolbar:  Show Toolbar when viewing site.
- Link Access Password:** A text input field with an 'Update' button. Below it, a note says: 'Use [http://www.your-website.com/wp-login.php?Your\\_Access\\_Password](http://www.your-website.com/wp-login.php?Your_Access_Password) to login as administrator.'
- Extra Settings:**
  - White IP List:** A large text area for entering IP addresses.
  - Black IP List:** A large text area for entering IP addresses to be blocked.
  - An 'Update' button is located below the Black IP List.
